

BioTek Jute Matting

Jute Matting is an environmentally friendly way of protecting young trees and shrubs by reducing competing weed growth and the need to use damaging herbicide.

Because the matting allows both air and water to pass unimpeded through its construction, the soil beneath it can breathe, promoting growth of desired plants while reducing evaporation and minimising watering needs. 100% biodegradable, Jute Matting is the simplest, safest, and most cost effective method of promoting new growth on the worst affected slopes because it enhances water filtration whilst protecting precious topsoils.

SPECIFICATIONS

1.83metres Wide x 25metres Long (Covers 45.75M2)
- Medium (750-800G/M2)

FEATURES

- ☒ An organic geotextile which aids in weed and erosion control
- ☒ The jute mat forms a mulch which suppresses weed growth and increase moisture retention in the soil to aid in the establishment of long term vegetation
- ☒ 100% biodegradable organic product made from Jute (hessian)
- ☒ Can be fastened with "U" shaped pins
- ☒ Choice of thickness and densities for different applications
